Mobile Programming: Session 6 Assignment Submission

Submit your **mini project** as a GitHub repository. It now has Firebase login, saves its data in Firestore under the signed-in user, updates live, and lets you edit and delete (steps 3 to 6 of the guide). Its README shows screenshots that prove each one.

1. Take your screenshots

Run your mini project on the emulator or your phone and take these four screenshots. On the emulator, click the camera icon in the Running Devices toolbar. On a phone, press power and volume down together.

1. `login.png`: your login screen, with your app's own name on it.
2. `console.png`: the Firebase console → Firestore Database, open on **your** data: the collection with your documents inside it.
3. `live.png`: add something in the Firestore console while your app is open: the screenshot shows the new item in your app, without restarting it. (Or: your app open on the emulator and your phone at once, with the same data on both.)
4. `denied.png`: sign in with a **second** account: it sees its own data, not yours. The screenshot shows the second account's empty (or different) screen.

2. Add them to your README

In your project folder, create a folder named `screenshots` and put the four images in it, with exactly the names above. Then open `README.md`, delete what is there, and write your own, like this:

```
# (Your mini project name)

One sentence about your app. It signs users in with Firebase Authentication, and
each
user's data is saved in Cloud Firestore under their own id, so two accounts
never see
each other's data, and every change appears live.

## Screenshots
![Login](screenshots/login.png)
![My data in Firestore](screenshots/console.png)
![Live update](screenshots/live.png)
![Second account sees nothing of mine](screenshots/denied.png)
```

3. Push to GitHub

1. Push your whole mini project to a public repository. Do **not** commit secrets you were told to keep out.
2. Open the repository in your browser and check that the four screenshots appear in the README. If one is missing, check that its file name matches exactly: capital letters count.

4. Submit the links

One form for both groups. Fill in your full name, student ID, your group, and the link to your repository, for example `https://github.com/your-username/bus_booking`.

Form: https://forms.gle/UeEZfRkomUmUhBAn7

Deadline for both groups: Saturday 31 October, 11:59 PM

The form closes at the deadline. You can edit your answer until then.

Rules

1. Your repository must be public, or it cannot be marked.
2. Type your own code. You must be able to explain any line of it.
3. Your Firestore rules must require sign-in. `if true` test mode does not count.
